Water Scarcity:

Water is one of the most valuable natural resources that our planet has. It is also a fundamental element for a human being's life. However, nowadays even in countries with adequate water resources, water scarcity is not uncommon. This sticky situation is a consequence of many factors such as collapsed infrastructure and distribution system, contamination, conflicts, and so on. It's important to mention water scarcity limits access to a dignified life considering that it means a more complicated health-care or a basic hygiene at home, for that reason it's necessary to talk about it and try to solve that issue.
